Specimen Papers and Mark Schemes/Keys

**Specimen Papers:**
- Paper 01
- Paper 02
- Paper 03/2

**Mark Schemes and Key:**
- Paper 01
- Paper 02
- Paper 03/2
READ THE FOLLOWING INSTRUCTIONS CAREFULLY.

1. This test consists of 60 items. You will have 1 hour and 15 minutes to answer them.

2. In addition to this test booklet, you should have an answer sheet.

3. Each item in this test has four suggested answers lettered (A), (B), (C), (D). Read each item you are about to answer and decide which choice is best.

4. On your answer sheet, find the number which corresponds to your item and shade the space having the same letter as the answer you have chosen. Look at the sample item below.

Sample Item

Benzene dissolves stains caused by

(A) tar
(B) fruit
(C) paint
(D) starch

Sample Answer

Sample Answer

The correct answer to this item is “tar”, so (A) has been shaded.

5. If you want to change your answer, erase it completely before you fill in your new choice.

6. When you are told to begin, turn the page and work as quickly and as carefully as you can. If you cannot answer an item, go on to the next one. You may return to that item later.

7. Figures are not necessarily drawn to scale.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.
1. Energy for cell activities is produced in the
   (A) nucleus  
   (B) vacuole  
   (C) ribosomes  
   (D) mitochondria

   Item 2 refers to the following diagram of the plant cell.

![Diagram of a plant cell]

2. The structure labelled X is the
   (A) vacuole  
   (B) nucleus  
   (C) chloroplast  
   (D) mitochondrion

3. Which of the following structures is associated with sexual reproduction?
   (A) Bulbs  
   (B) Corms  
   (C) Flower  
   (D) Rhizomes

4. A condom is an example of which type of birth control?
5. A vasectomy is an example of which type of birth control method?

6. Which of the following sexually transmitted infections are caused by viruses?
   I. AIDS  
   II. Herpes  
   III. Syphilis

   (A) I and II only  
   (B) I and III only  
   (C) II and III only  
   (D) I, II and III

7. The products of photosynthesis are
   I. Glucose  
   II. Oxygen  
   III. Carbon dioxide

   (A) I and II only  
   (B) I and III only  
   (C) II and III only  
   (D) I, II and III

8. Primary consumers feed on
   (A) herbivores  
   (B) producers  
   (C) carnivores  
   (D) omnivores

9. Which of the following enzymes digests fats?
   (A) Pepsin  
   (B) Lipase  
   (C) Renin  
   (D) Maltase

10. Which of the following arteries carry deoxygenated blood?
    (A) Renal artery  
    (B) Hepatic artery  
    (C) Coronary artery  
    (D) Pulmonary artery

   Items 4-5 refer to the following types of birth control methods.
   (A) Natural  
   (B) Barrier  
   (C) Hormonal  
   (D) Surgical
11. Which of the following blood groups is known as the universal recipient?

(A) A  
(B) B  
(C) AB  
(D) O

12. Which of the following bones is NOT located in the leg?

(A) Ulna  
(B) Tibia  
(C) Fibula  
(D) Femur

Item 13 refers to the following diagram of a human skeleton.

13. Which of the parts labelled A, B, C, D is a hinge joint?

14. The products of respiration are

I. water  
II. oxygen  
III. carbon dioxide

(A) I and II only  
(B) I and III only  
(C) II and III only  
(D) I, II and III

15. Which of the following pollutant gases has an affinity for the haemoglobin in red blood cells?

I. Carbon dioxide  
II. Sulphur dioxide  
III. Carbon monoxide

(A) I only  
(B) III only  
(C) I and II only  
(D) II and III only

16. Which of the following is NOT an excretory organ?

(A) Skin  
(B) Lungs  
(C) Kidney  
(D) Stomach

17. Which of the following are characteristics of sense organs?

I. Receive stimuli  
II. Contain specialized receptor cells  
III. Detect changes in the environment

(A) I and II only  
(B) I and III only  
(C) II and III only  
(D) I, II and III

18. The function of the iris in the eye is to

(A) focus rays of light  
(B) alter the shape of the lens  
(C) control the amount of light entering  
(D) keep the eyeball in shape
19. Which of the following is secreted by the endocrine system?

I. Bile
II. Enzymes
III. Hormones

(A) I only
(B) II only
(C) I and II only
(D) II and III only

20. Which of the following are stages in the life cycle of a mosquito?

I. Egg
II. Pupa
III. Larva

(A) I and II only
(B) I and III only
(C) II and III only
(D) I, II and III only

21. Which of the following conditions are MOST likely to encourage the growth of microorganisms on food?

I. Warm
II. Dry
III. Damp

(A) I and II only
(B) I and III only
(C) II and III only
(D) I, II and III

22. The use of another organism to control a pest is referred to as

(A) chemical control
(B) sanitary control
(C) biological control
(D) mechanical control

23. The collision of molecules within a substance results in the transfer of energy by

(A) radiation
(B) convection
(C) conduction
(D) evaporation

24. Liquids and gases normally expand when heated and contract when cooled. This behaviour explains the working of a

(A) water pump
(B) thermometer
(C) vacuum cleaner
(D) tyre pressure gauge

25. Which of the following conditions are MOST likely to cause a person to produce the greatest amount of sweat?

(A) Hot and dry
(B) Hot and humid
(C) Humid and cool
(D) Warm and humid

26. The unit of energy is the

(A) gram
(B) joule
(C) meter
(D) watt

27. Item 27 refers to the following energy conversion sequence.

Chemical → Electrical → Mechanical → Heat

28. The formula $p = mv$ is used to calculate

(A) speed
(B) energy
(C) momentum
(D) temperature
29. Which of the following does NOT conduct electricity?
   (A) Tin  
   (B) Iron  
   (C) Plastic  
   (D) Copper  

30. Voltage equals  
   (A) Current x Resistance  
   (B) Current  
   (C) Resistance  
   (D) Current + Resistance  

31. Which of the following is a safety device?  
   (A) Fuse  
   (B) Plug  
   (C) Bulb  
   (D) Switch  

32. Which of the following is the first action which should be taken to prevent an electrical shock?  
   (A) Call the fire service  
   (B) Turn off the electricity  
   (C) Throw water on the person  
   (D) Cover the person with a blanket  

33. Which of the following is NOT needed to start a fire?  
   (A) Heat  
   (B) Fuel  
   (C) Oxygen  
   (D) Nitrogen  

34. The purpose of the protective gear is to shield the welder’s  
   (A) ears  
   (B) eyes  
   (C) head  
   (D) nose  

35. A Class 2 lever has the  
   (A) fulcrum and effort in the middle  
   (B) fulcrum between the effort and load  
   (C) effort between the load and the fulcrum  
   (D) load between the fulcrum and the effort  

36. Which of the following machines is MOST likely to make the loading of a truck easier?  
   (A) Pulley  
   (B) Lever  
   (C) Wheelbarrow  
   (D) Incline plane  

37. Which of the following is an advantage of using plastics?  
   (A) They are combustible.  
   (B) They are non-corrosive.  
   (C) They are non-biodegradable.  
   (D) They give off toxic fumes when burnt.  

38. Which of the following metals is the LEAST reactive?  
   (A) Silver  
   (B) Copper  
   (C) Sodium  
   (D) Aluminium
39. Stainless steel is an alloy of
   (A) iron and carbon
   (B) copper and zinc
   (C) copper and tin
   (D) lead and nickel

40. Which of the following will not reduce or prevent rusting?
   (A) Painting
   (B) Washing
   (C) Galvanizing
   (D) Electroplating

41. The safety symbol indicates that a substance is
   (A) toxic
   (B) explosive
   (C) corrosive
   (D) flammable

42. A solution with a pH of 5 is a
   (A) weak acid
   (B) strong acid
   (C) strong alkali
   (D) neutral solution

43. A mixture of starch and water is a
   (A) colloid
   (B) solvent
   (C) solution
   (D) suspension

44. Which of the following techniques is used to separate the colours that are found in black ink?
   (A) Filtration
   (B) Distillation
   (C) Chromatography
   (D) Solvent extraction

45. The major cause of the seasons on earth is the
   (A) constant tilt of the earth’s rotational axis with respect to its orbit around the sun
   (B) periodic wobbling of the earth on its axis of rotation
   (C) changing distance of the earth from the sun at different times of the year
   (D) changing relative positions of the earth, moon and the sun

46. A cycle of moon phases can be seen from earth because the
   (A) moon’s axis is tilted
   (B) moon spins on its axis
   (C) moon revolves around the earth
   (D) moon’s distance from the earth changes at a predictable rate

47. Which of the following statements about the moon is correct?
   (A) It is a planet.
   (B) It orbits around the sun.
   (C) It is a satellite of the earth.
   (D) It has oceans of water.

48. Which of the following keeps the planets in the solar system in orbit around the sun?
   (A) Thermal energy
   (B) Gravitational force
   (C) Atmospheric pressure
   (D) Electromagnetic energy
49. The display of horizons on a vertical cross section through the soil is termed the soil
(A) bed
(B) layer
(C) profile
(D) strata chart

50. Finely divided, partially decomposed organic matter found in soil is called
(A) silt
(B) sand
(C) loam
(D) humus

51. Two major processes that occur in the carbon cycle are
(A) weathering and erosion
(B) fixation and denitrification
(C) evaporation and transpiration
(D) photosynthesis and respiration

52. The LEAST effective way to purify water is
(A) boiling
(B) filtration
(C) distillation
(D) chlorination

53. Which of the following is LEAST likely to be a source of water pollution?
(A) Storm water
(B) Untreated sewage
(C) Agricultural runoff from farms
(D) Effluent from industries and factories

54. Which of the following navigational devices depends on artificial satellites to determine locations?
(A) GPS
(B) Sonar
(C) Radar
(D) Compass

55. Which of the following is true about the ‘greenhouse effect’?
I. It makes the earth cooler
II. It is associated with carbon dioxide gas
III. It is caused by heat trapped in the atmosphere
(A) I and II only
(B) I and III only
(C) II and III only
(D) I, II and III

56. Which of the following gases is NOT believed to contribute to the increase in global temperatures via the greenhouse effect?
(A) Oxygen
(B) Methane
(C) Nitrous oxide
(D) Carbon dioxide

57. Which of the following systems uses a non-renewable resource to generate electricity?
(A) Geothermal plants using steam
(B) Wind turbines using air movement
(C) Solar panels using the sun’s radiation
(D) Nuclear power plants using radioactive elements

58. Which of the following is NOT considered an alternative source of energy?
(A) Solar
(B) Wind
(C) Gasoline
(D) Geothermal
59. The weight of a body acts through a single point called the
   (A) edge
   (B) fulcrum
   (C) moment
   (D) centre of gravity

60. There are three states of equilibrium. Which of the following is NOT one of these states?
   (A) Stable
   (B) Regular
   (C) Neutral
   (D) Unstable

END OF TEST

IF YOU FINISH BEFORE TIME IS CALLED, CHECK YOUR WORK ON THIS TEST.

READ THE FOLLOWING INSTRUCTIONS CAREFULLY.

1. This paper consists of SIX questions in TWO sections: A and B.

2. SECTION A consists of FOUR questions. Answer ALL questions. Section A is worth 70 marks.

3. SECTION B consists of TWO questions. Answer ALL questions. Section B is worth 30 marks.

4. Write your answer in the space provided in this answer booklet.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.

SECTION A

Answer ALL FOUR questions.

1. (a) (i) Distinguish between ‘d.c. current’ and ‘a.c. current’.

………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..

(2 marks)

(ii) State the name of a material that is suitable for insulating electrical wires.

………………………………………………………………………………………..
………………………………………………………………………………………..

(1 mark)

(b) A local electricity company charges $1.00 per kWh for the first 2000 kWh and $3.50 for every kWh afterwards. A fuel adjustment charge of $0.50 per kWh is added to all electricity bills. If Mrs Brown’s previous monthly meter reading was 17 800 kWh and the current monthly meter reading is 20 300 kWh, calculate the electricity bill for Mrs Brown for the current month.

………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..
………………………………………………………………………………………..

(5 marks)
(c) Table 1 shows the electricity usage for the Brown family for the period July to December.

**TABLE 1: ELECTRICITY USAGE FOR THE BROWN FAMILY, JULY–DECEMBER**

<td>2500</td>
<td>4000</td>
</tr>
</tbody>
</table>

(i) Use the grid on page 4 to plot a graph to show the data in the table.  

(ii) Write a suitable title for the graph.

………………………………………………………………………………………

………………………………………………………………………………………

(1 mark)
(d) (i) Define the term ‘machine’.

……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………

(1 mark)

(ii) State the formula used to calculate the mechanical advantage of a machine.

……………………………………………………………………………………………………

(1 mark)

(iii) Suggest ONE energy conservation measure the Brown family may use to prevent high electricity usage such as that seen in December.

……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………

(1 mark)

(iv) Plan and design an experiment to determine which type of lever (a first class lever or a second class lever) is more efficient for lifting a specific weight. Use the following headings in your response.

Hypothesis

……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………

(2 marks)

Procedure

……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………

(5 marks)

<td></td>
<td></td>
<td>Protein</td>
</tr>
</tbody>
</table>

(a) Complete Table 2. 

(b) Figure 1 shows a diagram of a typical cell found in the green pea.

![Diagram of a typical plant cell](image)

**Figure 1: Typical plant cell**

State the name of the parts labelled A and B.

A .......................................................... ........................................

B .......................................................... ........................................

(2 marks)
(c) (i) Explain the principle of ‘salting’ in food preservation.

…………………………………………………………………………………………
…………………………………………………………………………………………
…………………………………………………………………………………………
…………………………………………………………………………………………

(2 marks)

(ii) Other than ‘salting’, suggest ONE method suitable for the preservation of breadfruit and ONE method suitable for the preservation of green peas.

Breadfruit

…………………………………………………………………………………………
…………………………………………………………………………………………

(1 mark)

Green peas

…………………………………………………………………………………………
…………………………………………………………………………………………

(1 mark)
(d) Figure 2 shows a breadfruit being roasted.

![Diagram of breadfruit being roasted](image)

**Figure 2: A breadfruit being roasted**

(i) Identify TWO properties of the metal used to make the mesh that makes it suitable for the purpose it is being used for.

- [ ]
- [ ]
- [ ]
- [ ]

(2 marks)
(ii) Describe TWO processes by which the breadfruit receives heat energy from the stove.

3. Figure 3 is a diagram of a human skeleton.

![Diagram of the human skeleton](image)

**Figure 3: Diagram of the human skeletal system**

(a) (i) State the name of the types of joints labelled A and B.

A ……………………………………………………………………………………………………………………………………………………………………………………

B ……………………………………………………………………………………………………………………………………………………………………………………

(2 marks)
(ii) State the name of the bones labelled C and D.

C ........................................................................................................................................

D ........................................................................................................................................

(2 marks)

(iii) One of the functions of the skeleton is to protect the organs of the circulatory and respiratory systems. State ONE function, other than protection, of the skeletal system.

........................................................................................................................................

........................................................................................................................................

........................................................................................................................................

........................................................................................................................................

........................................................................................................................................

........................................................................................................................................

(1 mark)

(b) Discuss the physiological effects of exercise on the circulatory and the respiratory systems.

Circulatory system: ................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

(6 marks)
(c) Sam has a disease that causes the ciliary muscles of the eye to malfunction. Explain what effect this disease may have on Sam’s ability to view objects.

……………………………………………………………………………………………….
……………………………………………………………………………………………….
……………………………………………………………………………………………….
……………………………………………………………………………………………….

(4 marks)

Total 15 marks
4. (a) Define the following terms:
   (i) Centre of gravity
   (ii) Stable equilibrium

(b) A load of 50 N is applied 10 m away from the fulcrum of a lever. What is the distance at which an effort of 100 N should be applied to ensure that the lever remains at equilibrium?
(c) Define the following terms:

(i) Energy

(ii) Momentum

(d) (i) State ONE energy conversion that takes place when a solar powered car is in motion.
(d) (ii) An SUV weighing 2 000 kg travelling north with a velocity of 5 m/s collides head-on with a truck weighing 4 000 kg and travelling south at a velocity of 2 m/s. Calculate the velocity of the vehicles after the collision.

**Ref** C.III.5

**Possible Response** Oil spills, pesticides, fertilizers, industrial waste and domestic waste

Run-off from agricultural crops contains chemicals such as phosphates and nitrates. (1) These chemicals encourage the growth of aquatic plants including algae. (1) Rapid growth of algae covers the source of the water (1) preventing the light from reaching aquatic life. (1) This prevents aquatic plants from photosynthesizing and results in their death. (1) The lack of oxygen results in aquatic animals not having enough oxygen for respiration, causing their death. (1)

**Instructions or Comments** 1 mark for each source

01230032/SPEC 2015
Answer ALL questions.

1 (a) You are provided with the following materials and apparatus:

- 4 potato strips each of 5.0 cm in length
- 2 boiling tubes
- Solution X
- Solution Y
- Spatula
- Stopwatch

Procedure

1. Fill one boiling tube with Solution X and place two potato strips inside the tube.
2. Fill one boiling tube with Solution Y and place two potato strips inside the tube.
3. Start the stopwatch immediately. (2 marks)

4. For a period of 30 minutes, remove the potato strips every 5 minutes and measure them,

(i) Construct a suitable table and record your observation. (5 marks)
(ii) Give the table a suitable title.

…………………………………………………………………………………………………………..
……………………………………………………………………………………..
(1 mark)

(iii) State the name the process which is occurring in the experiment.

…………………………………………………………………………………………………………..
…………………………………………………………………………………………………………..
(1 mark)

(b) You are provided with the following materials and apparatus:

- Benedict’s solution
- Potassium iodide solution
- Biuret reagent
- Ethanol
- A mixture of cereal and milk
- Test tubes

Use the reagent to investigate the food nutrients found in the cereal and milk as instructed below.

**TABLE 1: RESULTS OF FOOD TESTS**

<table>
<thead>

<tr>
<td>4. Place approximately 5 cm$^3$ of the mixture of cereal and milk in a test tube and three drops of Benedict’s solution</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Record your observations and inferences in the table. (16 marks)

Total 25 marks
Malik finds that after playing football, his white shorts usually has grass stains. His friends suggested that he use one of the following chemicals to remove the grass stains: acetone, ethanol, turpentine, methylated spirits. Plan and design an experiment to help Malik determine which chemical is MOST suitable for removing the grass stains.

(a) Write a suitable hypothesis for the experiment.

(b) Use the following headings to describe a procedure that Malik may use to conduct the experiment.

Total 25 marks
Jameel constructs a lever which has a fulcrum at C and a load of 100 g at B as shown in Figure 1. He tried to balance the lever by applying an effort at A with a 10 g block, but he found that 15 g of additional mass was required.

![Figure 1: Diagram of Lever](image)

(a) Jameel is interested in finding the values of masses which will balance the lever when they are hung at points D–J so he creates Table 1. Complete the table by using your ruler to measure the distance from the fulcrum, C, to the points D, E, F, G, H, I and J in Figure 1.  

**TABLE 3: MASS REQUIRED TO BALANCE LEVER AND DISTANCE OF EFFORT FROM FULCRUM**

<table>

</table>
(b) Write a hypothesis relating the distance of the effort from the fulcrum and the mass required to balance the lever.

...........................................................................................................................................................................
...........................................................................................................................................................................
(2 marks)

(c) (i) On the grid provided on page 9, plot a line graph of Jameel’s results for the distance of the effort from the fulcrum against the mass required to balance the lever. (4 marks)

(ii) Label the axes on the graph. (2 marks)

(d) (i) Extend your graph to read the point where the load is 250 g. Mark this point with an X. (2 marks)

(ii) Using the graph, determine the value of the distance from the fulcrum for a load of 250 g. Draw TWO dotted lines in the appropriate places on the graph to assist you with your reading. (4 marks)

(e) From your graph, state how the effort changes as the distance from the fulcrum increases.

...........................................................................................................................................................................
...........................................................................................................................................................................
(1 mark)

(f) Figure 2 is a picture of one of the masses used by Jameel. In the box provided on page 10, draw a two-dimensional diagram of the mass. Include the following in your diagram:

- The magnification
- Clear lines
- A title for the drawing

Figure 2: One of the Masses used by Jameel

</tbody>
</table>

- Hypothesis links the two variables
- Hypothesis is measurable

### Question 3(b)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Hypothesis links the two variables
- Hypothesis is measurable

### Question 3(c)(i)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Correct plotting of points

### Question 3(c)(ii)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Correct labelling of axes
- x - mass; y - distance

### Question 3(d)(i)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Smooth line extended (1)
- Point marked (1)

### Question 3(d)(ii)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Reading from the graph (1)
- Correct unit (1)
- Correct x value (1)
- Correct y value (1)

### Question 3(e)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Small decrease in effort results in large increases in distance from fulcrum

### Question 3(f)

<table>
<thead>
<tr>
<th>Ques</th>
<th>Syll Ref</th>
<th>Possible Response</th>
<th>Instructions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>C.V.4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- The magnification
- Clear lines
- A title for the drawing

### TOTAL

<table>
<thead>
<tr>
<th>UK</th>
<th>XS</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>20</td>
</tr>
</tbody>
</table>
